

ANHYDRIX

DESICCANT DRYING TABLET

Natural Gas drying at low pressures and low flow rates can be very difficult. Most conventional salt-type desiccants are not able to adequately dry gas under low pressures (<75 psi) or when stringent pipeline specifications (<7 lbs./mmscf) must be met.

Anhydrix was developed to meet dew points where other desiccants and glycols cannot.

Anhydrix can be used by itself or in combination with our other desiccants such as **DT-1500** and **DT-1400**. In these applications, the gas flows through the **DT-1500** or **DT-1400** first removing most of the moisture and then through the **Anhydrix** to further reduce the dew point.

7 LB/MMCF
ATTAINABLE AT
50 PSI & 60°F

20 LB/MMCF
ATTAINABLE AT
25 PSI AND 80°F

CONVENIENT
PACKAGING
